BEACH DRIVING TIPS

- You are required to decrease tire pressure before entering the beach OVI driving corridor. Tire pressure is critical for successful overland driving. 15 p.s.i. is recommended. Friction may cause pressure to increase while you drive, making it necessary to stop and reduce pressure again. Your beginning tire pressure should not exceed 18 p.s.i.
- Always check tides before entering the off-road corridor. Portions of the beach may be impassable at high tide.
- If you feel you are in danger of getting stuck, check your tire pressure and let air out if necessary; try backing up in your tracks before moving ahead. Do not spin tires - this will only cause the vehicle to dig in.
- Do not speed - excessive speed endangers you, your vehicle, other beach users, and wildlife. Experienced beach drivers know that a slow, steady speed and correct tire pressure are more effective than faster speeds.
- Always be alert for wildlife when driving on the beach - tern and plover chicks may attempt to hide in vehicle tracks when frightened.

TIRE TERMINOLOGY

Minimum acceptable tire and wheel dimensions for all vehicles being registered for a permit are as follows:

Metric tire designation as shown on sidewall:
